### Fund update

The portfolio is constructed from a 'bottom-up' process, that favours individual companies with attractive return characteristics. There are no pre-determined allocations to any region or market sector. This has resulted in a portfolio with above-average weightings in companies in the technology, healthcare and materials sectors. It has also meant that the portfolio has a low exposure to energy and utilities. Recent activity has included reducing exposure to companies where strong share price growth had taken ratings to levels we considered to be extended. We have also reduced holdings to cyclical areas. There were no currency hedges in place during the quarter.

Since January 1st 2018, the Fund has employed a total return approach to income distributions. This means that the payment to investors can be sourced from both conventional income receipts and sustainable capital gains.

### Past distributions

The accounting period for the Fund changed in 2015 and is now aligned with calendar quarters.
